Mission

Unexpected amazingness for families with cancer.

OUR MISSION

Bringing Hope Home is a non-profit organization that provides Unexpected Amazingness to local Families with cancer through financial and emotional support. Through our Light of Hope Family Grant, we offer a one-time grant to pay essential household bills for Families with cancer.

Families served: 4,200+ total Families since 2008

Geographic Areas served: PA, NJ, DE, MD, NY, CT

Different types of cancer we work with: 65

Number of cancer centers we work with: 62

We help men, women and children with any type of cancer

~~~

Unexpected amazingness for families with cancer.

#### **Problems and Data Opportunities**

- 1. No way to forecast nomination demand.
  - a. Led to a first-come, first-served process for nominations to manage supply.
  - b. Opportunity: use the pre-application as a surrogate for demand.
- 2. No systematic way to identify top nominators
  - a. BHH wants to partner with motivated nominators.
- 1. Wait time for families is too long (6-8 weeks).
  - a. Families and nominators were getting frustrated.
  - b. Opportunity: use activity data to identify bottlenecks.
- 2. No elegant way of accessing data across different systems (Salesforce, DonorPerfect, QB).
  - a. Currently rely on summary reports of only a few key features.
  - b. Opportunity: use an integrated dashboard.

Unexpected amazingness for families with cancer.

#### Data for Good Exchange 2017

## **Data**

- Application data is fed into Salesforce
- Export a snapshot with a Salesforce utility (DataLoader).
  - Basically querying a SQL-like database.
- Multiple tables
  - Applications (3729 rows)
  - Medical team referees (552 rows)
  - Institutions (126 rows)
- 'Dirty' data
  - User entered fields typos introduce duplicate records.
  - Legacy data imported from prior system missing activity timestamps etc.

#### Unexpected amazingness for families with cancer.

#### **Analytic 1: Project demand**

Problem: No way to forecast nomination demand.

Opportunity: use the pre-application as a surrogate for demand.

 BHH repeatedly had conversations about how to balance helping as many families as possible with giving an impactful grant amount.

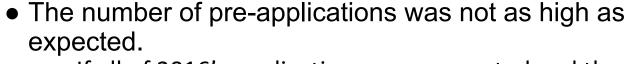

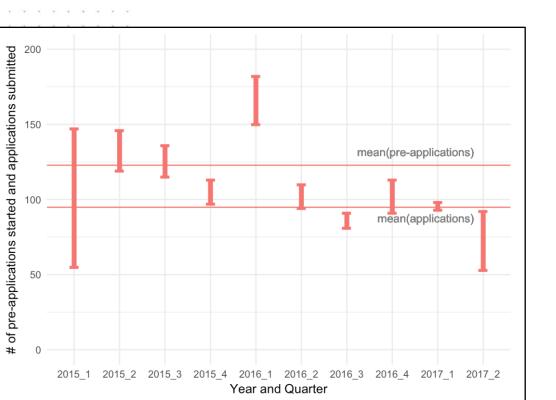

#### **Analytic 1: Project demand**

 If all of 2016's applications were accepted and the money was shared equally, each grant would be:

$$\frac{\text{# of preapps}}{\sum grants \ awarded} = \$1195$$

- Reasonably simple retrospective data analytics, leads to an objective decision.
- o Implemented in September's application cycle.
  - 40 applications were received and all could be funded.

Unexpected amazingness for families with cancer.

#### **Analytic 2: Identify top nominators**

Problem: No systematic way to identify top nominators. Opportunity: Identify and partner with motivated nominators.

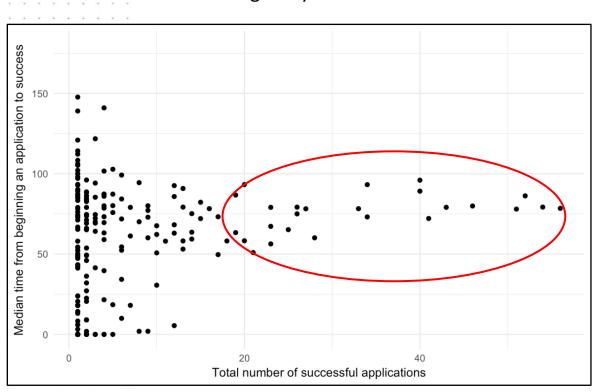

- Identify nominators that consistently succeed in their applications.
  - O How many applications have they submitted?
  - What is the typical time between starting an application and submission?
  - O How consistently do they succeed?

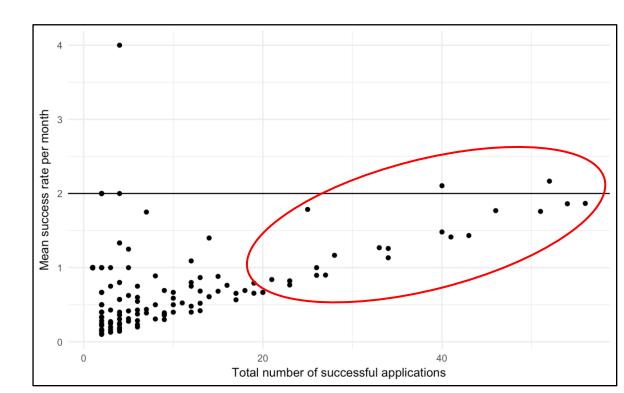

## **Analytic 2: Identify top nominators**

- What is the typical time between starting an application and submission?
  - 50-100 days.
    - accepting all applications in each month would greatly decrease this wait.

O How consistently do they succeed?■ >1 per month.

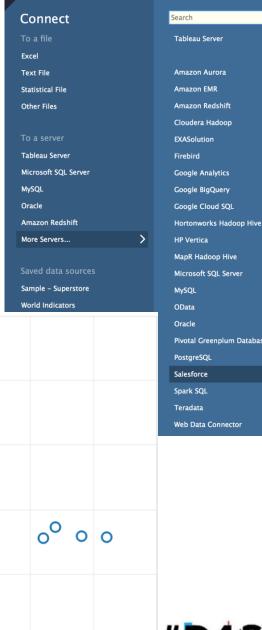

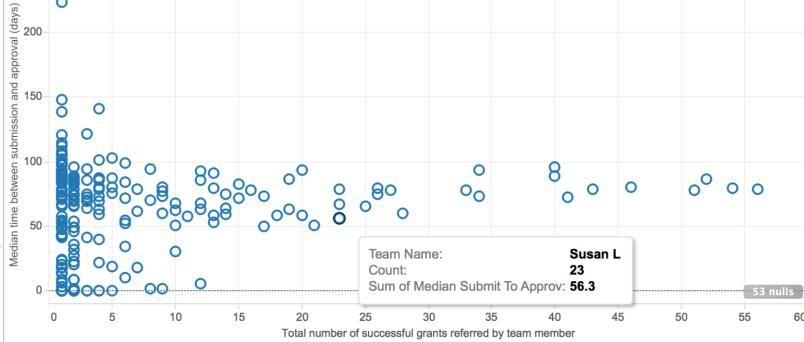

250

Unexpected amazingness for families with cancer.

# **Next steps**

- Live connection to Tableau.
  - Tableau makes connections to Salesforce super simple.
- Incorporate other data sources.

for families with cancer.

## **Outcomes from Immersion**

#### BHH decided to:

- Reduce the grant amount to \$1200 (analytic 1)
- In each month, plan to help ~40 families (based on Sep.)
  - 20 of those will be reserved for our 'most active' hospitals and nominators (analytic 2).
  - ~20 will remain first-come, first-served

Unexpected amazingness

#### Thank you!
